PLANT PATHOLOGY

Cartwright, R.D. 2008. Rice Pathology – I received \$114,000 from the Arkansas Rice Promotion Board to continue research on Integrated Disease Management for Rice for Arkansas. This project implemented 2500 field plots in 2008 and assessed over 3500 for disease. Major focus was on the relationship of potassium to stem rot and yield of rice; novel fungicides to control sheath blight, stem rot, kernel smut and false smut; yield loss of different rice cultivars to sheath blight; and evaluation of rice germplasm for reaction to stem rot, black sheath rot, kernel smut, false smut, blast, bacterial panicle blight, narrow brown leaf spot, and other rice diseases under field conditions.

Cartwright, R.D. 2008. Soybean Pathology – I received \$47,000 from the Arkansas Soybean Promotion Board to research aerial blight and chloride toxicity of soybean. Focus was on the development of standard screening methods for both problems. Good success was achieved in the evaluation of 293 soybean cultivars in replicated trials at the Vegetable Substation near Kibler under pivot irrigation for reaction to aerial blight. Results were provided to the Cooperative Extension Service for inclusion in the 2008 Soybean Update and to the Arkansas Soybean Variety Testing Program for use in the annual ASVT report. The same set of cultivars were evaluated in the greenhouse using the Shannon chloride toxicity testing method and results compared to the includer/excluder system of the late Darryl Widick at ASU. We tested 90 of the cultivars in a replicated field trial in Prairie County as well. Results were provided to the cooperators above for use in reports.

Cartwright, R.D. 2008. At the request of administration and the Soybean Promotion Board, I initiated a comprehensive project on soybean seed quality, involving 6 faculty members in PLPA and CSES and receiving funding of \$191,000 from the Board and \$19,000 from administration for equipment. A seed quality assessment lab was established at UAF and an analyst hired. An education coordinator was hired and a statewide planting seed survey completed during the year with results presented to Arkansas Farm Bureau, the Soybean Promotion Board and the Annual Soybean Research Conference. Results will be widely presented in early 2009 to soybean growers in Arkansas, Louisiana and Mississippi.

I assisted other soybean researchers as needed, providing inoculum and inoculation for the frogeye screening effort of Dr. Monfort at the Newport Station and the greenhouse frogeye project of Dr. Rupe at UAF.

Cartwright, R.D. 2008. Sorghum Pathology. I received \$34,000 from the Corn and Grain Sorghum Board for research on Integrated Disease Management in Sorghum. We evaluated 30 sorghum hybrids for disease reaction at four locations in the state and presented results to the Arkansas Sorghum Variety Testing Program for use in the annual report and to the Cooperative Extension Service for use in the 2008 Sorghum Update. We conducted 7 fungicide trials on sorghum and reported results to county extension agents at In-Service Training in December and these results will be presented repeatedly during January and February 2009 at grower meetings. We evaluated lodged sorghum fields for soil and tissue nutrient status and found low potassium a potential factor in lodging and stalk rotter disease.

Korth, K.L. *Medicago truncatula* responses to insect damage: As part of a collaborative project, we continue studies on insect responses in the model forage legume, *Medicago truncatula* study. We have continued studies of novel terpene synthase genes induced by insect damage and have continued a collaboration with Dr. Feng Chen at University of Tennessee-Knoxville. We are examining the role of calcium oxalate crystals in insect defense (in collaboration with Dr. Paul Nakata, USDA-ARS/ Baylor School of Medicine), and have continued these studies in soybeans. We have shown that crystal levels in leaves can be increased by exogenous plant treatments. We have completed microarray analysis of gene expression patterns to identify genes important for calcium oxalate formation.

Korth, K.L. *Regulation of the cytosolic isoprenoid biosynthetic pathway*: We continue research on regulation of sterol production in plants and analyzed mutant *Arabidopsis* lines with altered sterol levels. Transgenic rice lines have also been generated and will be analyzed for altered sterols.

Smith, Carl, 'Starseeds' Land Art Project, Old Main Lawn, University of Arkansas, Fayetteville, Arkansas, USA, October 2008 – May 2009.

This involved the conceptualization, design and construction of a distinctive, site-sensitive, temporary land-art piece for the University of Arkansas campus. The piece was designed in collaboration with local landscape designer Stuart Fulbright, and constructed by myself, Stuart, and Chaim Goodman-Strauss (Chair of the Mathematics Department). Permission to build involved negotiation and liaison with the Facilities Management Office and the Campus Grounds Committee, before final approval was given by the University Chancellor. The construction program included an 'open day' where students of landscape architecture, mathematics and fine art, as well friends and family, could contribute to the assembly of Starseeds. The piece was in place from December 2008 until the end May 2009. Starseeds attracted significant media attention including:
